

AI Security & Governance Webinar

Tuesday, August 25

11 AM - 12 PM PT

Zoom

As A.I. moves from chat interfaces to agent-like systems that can draft, route, and connect into workflows, builders face a practical challenge: capturing real productivity gains without losing control of risk, data, and the project record. Join Nate Fuller, author of the Artificial Intelligence in Construction research report, for an insightful webinar exploring the current and future state of AI in construction.

This webinar will cover:

- Executive synthesis from 30+ industry interviews
- Real jobsite A.I. use cases from leading builders
- Value-chain view of where A.I. delivers leverage
- Grounded outlook for agentic A.I. in construction
- Common challenges related to data security and governance
- Practical operating model for responsible adoption
- Guardrails for scaling A.I. in construction
